

The No-Reno Smart Home Guide

Multi-Storey / Landed edition · Seamless Tech for Effortless Living

This guide shows you how to turn your existing home into a connected one you run from a single app or a quick word to Google, without a renovation. In most homes, going smart means swapping switches, not touching walls: your electrician removes each normal switch and wires a smart one in its place. We handle the app setup and voice control. Read this in ten minutes and you will know exactly what to buy, what to tell your electrician, and what to avoid.

1. Your switch map (Multi-Storey / Landed)

A typical Multi-Storey / Landed home needs about **25 smart switches** and **3 hubs** for full coverage. Walk your home with this checklist and count your own points:

Area	What to control	Typical count
Living + dining	Lights, feature lights, fans	5 switches
Kitchen + dry kitchen	Lights, cabinet lights	3 switches
Bedrooms (4-5)	Lights + fans	10 switches
Bathrooms	Lights	3 switches
Stairways + corridors	Lights (two-way points)	3 switches
Porch / balcony / yard	Lights	1 switch

Multi-storey homes need about 25 switches and 3 hubs for full WiFi/Zigbee coverage across floors. Text us your floor plan and we will map it exactly.

2. The neutral wire question, settled

Most Singapore homes were never wired with a neutral at the switch point, and that is fine. Our non-neutral smart switches draw power through the lighting circuit, so they work with no rewiring. The one catch: each circuit needs lights of 7W or more, or the light may flicker. A neutral wire is only required for two products: the smart LCD panel switch and the smart dimmer switch. Want either? Budget for an electrician to pull a neutral to that point.

3. Want dimming? Buy smart bulbs, not a dimmer switch

A smart dimmer switch needs a neutral wire, comes in one colour and one gang, and costs about \$120 to \$150 fitted. Smart bulbs dim, change brightness, and change colour from the app with no neutral wire and no special switch, at roughly \$32 per spotlight at retail (10% off through our partner Zenterra when we refer you). Decide before you buy your lights: once non-smart fittings are in, a dimmer switch becomes your only route to app dimming.

4. Keep your normal aircon and TV

Do not pay extra for a smart aircon; it runs on its own separate app that will not join your scenes. Instead, pair a normal aircon with a smart IR remote (your Essential package includes 5). One app then controls temperature, fan speed, and mode, right next to your lights. Say "movie time" and the aircon settles to 24 as the lights dim. The same trick works for TVs and any infrared device. One honest limitation: there is no live status if someone uses the physical remote.

5. Stay on an open platform

Closed ecosystems like Aqara work only if you buy everything from one brand, through one app. Our system runs on Tuya, an open platform: a fan from one brand, switches from another, sensors from a third, all in one app, with Google and Alexa voice control included. Apple HomeKit is generally not supported; if your household lives in Apple Home, talk to us early.

6. Renovating? Time it right

If your reno has not started, visit us first. We do a site visit with your electrician before the electrical work, then return near the end of the reno to finish setup, usually a half-day. Already renovated? Smart switches are largely plug-and-play; the odd shallow switch box may need deepening, and a neutral pull is only needed for panel or dimmer switches.

7. What it costs for a Multi-Storey / Landed

Package	What you get	Price
Essential, Multi-Storey House	25 smart switches, 3 WiFi hubs, 5 smart IR remotes, app config + Google	\$2,799

Mausclick switch design or 4-gang switch adds \$10 per switch (usual price \$15) on any tier. LINE8 power track bundles from \$1,388, self-contained with their own switches and hubs; installation is \$50 per track segment by LINE8, and a premium colour finish adds \$100. Already taking a package and want LINE8 too? WhatsApp us for the top-up price so you do not pay for anything twice.

8. Warranty and perks

Every package includes app setup, Google or Alexa voice integration, and a full first-year warranty covering parts, labour, and service. Add a free 2-year limited extension (parts covered) in exchange for a social media review. Earn 3 YUU points per dollar; a typical package returns around 3,000 points, roughly \$27 in value.

9. Your next step
